

THE KAADY WATER SMART SYSTEM PROTECTS THE ENVIRONMENT AND SAVES WATER. HERE'S HOW:

GOOD FOR PROTECTING RIVERS AND STREAMS

At Kaady, most water is reclaimed through the baffling/filtration system illustrated here, while the overflow is safely discharged into sanitary treatment facilities.

GOOD FOR PRESERVING YOUR INVESTMENT

Rags and sponges used in driveway washes become impregnated with dirt and grit that can scratch vehicle surfaces; meanwhile, home garden hoses lack enough pressure to remove all soap film, letting it 'bake' into the finish and damage the paint. That's why most manufacturers recommend the same methods we use at Kaady.

GOOD FOR SAVING WATER

On average, Kaady's state-of-the-art automatic car washes use only 30-45 gallons of fresh water per vehicle ...only about a third of the 80-140 gallon average for the typical home driveway wash.

GOOD FOR CHARITY FUNDRAISING

Unfortunately, charity 'parking lot' washes are a leading contributor to wasteful water usage and to the pollution of rivers and streams from storm drain runoff; but fortunately, Kaady car washes offer easy and lucrative alternative fund-raising programs. Visit www.kaady.com for details.
